CLAIMS

What is claimed is:

1. A method of treating carcinomas, melanomas, colorectal cancer, ovarian cancer, and any other susceptible forms of cancer, employing a composition comprising about 6.7 grams of resorcinol by weight, about 5 grams of camphor by weight, about 2.1 grams of sodium sulfathiazole by weight, and about 86.2 grams of propylene glycol by weight;

said composition is applied employing saturated cotton swabs inserted and allowed to remain 4 to 5 minutes in contact with sublingual and rectal tissues;

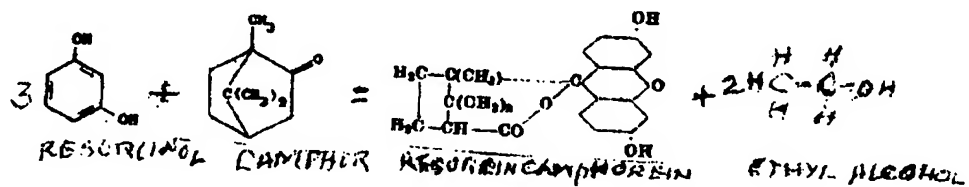

this procedure is administered morning and evening for two days and may be repeated, if desired, since there are no adverse side effects other than a 5 to 10 second stinging sensation;

for visible cutaneous tumors, the composition is applied directly.

What is claimed is:

2. An extremely effective anticancer agent is produced by the chemical reaction between resorcinol and camphor. The reaction is shown by the chemical equation shown below. The product of the reaction is named "resorcincamphorein". (Beilstein E II 19 p245).
